# MIPAR™
Release Notes
v1.0.1

Turbocharged Responsiveness

v1.0.0 made some nice gains, but in v1.0.1 we've taken it to another level.

You'll notice dramatic improvements in the responsiveness of both Recipe control toggling and image displaying, when switching between Recipe steps.

Bugs Fixed

- Fixed a bug in the Processed Image Editor which incorrectly indicated that image files did not exist when trying to load reference images using the "Add" button

- Fixed bug with showing B/W reference image in the Image Processor

Other Changes

- Optimization window now has a help button
